EE895 Evaluation Board

The EE895 Evaluation Board facilitates the testing of the EE895 miniature sensor module for CO₂, temperature (T) and barometric pressure (p).

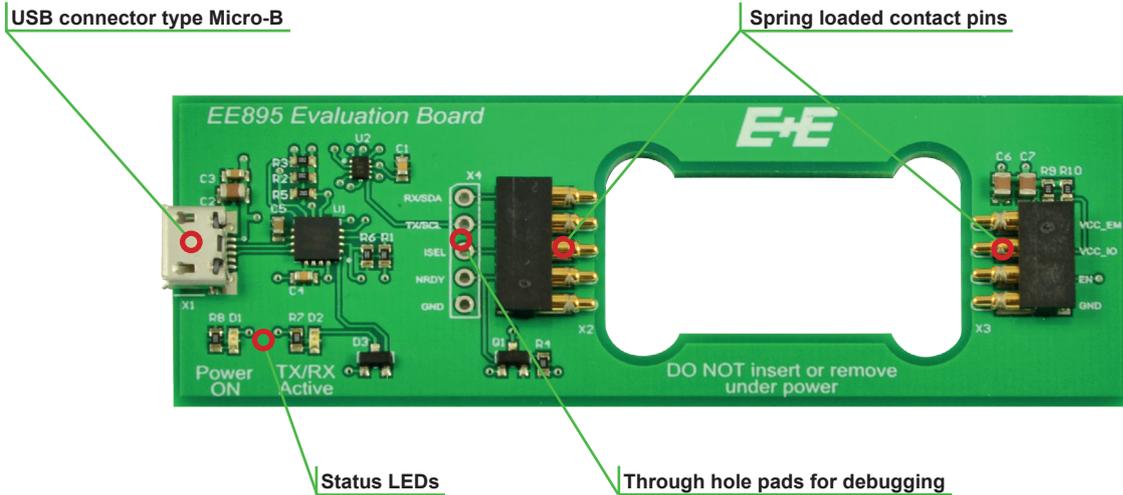

The spring loaded contact pins allow for easy connection of the EE895 sensor module.

The EE895 Evaluation Board connects to a PC using its USB Micro-B port and a standard USB cable. The cable is not included in the scope of supply.

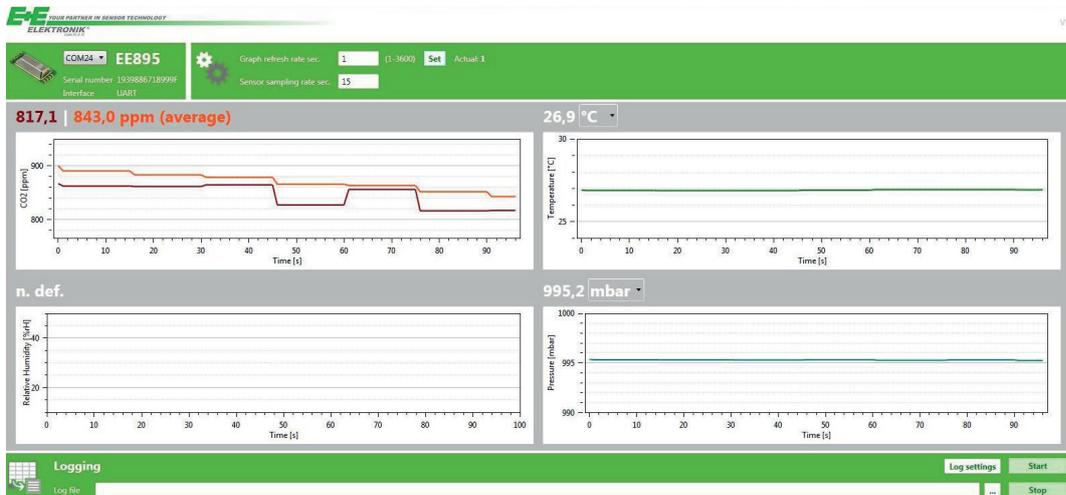

The Sensor Evaluation Software (free download at www.epluse.com/evaluation-sw) displays the serial number of the EE895 and the measured data in graphical form. The user can set the refresh rate for the graph, the sampling rate of EE895 and the measurement units for temperature and pressure. Additionally, the measured data can be saved as .CSV file, which can be easily imported in Excel.

Features

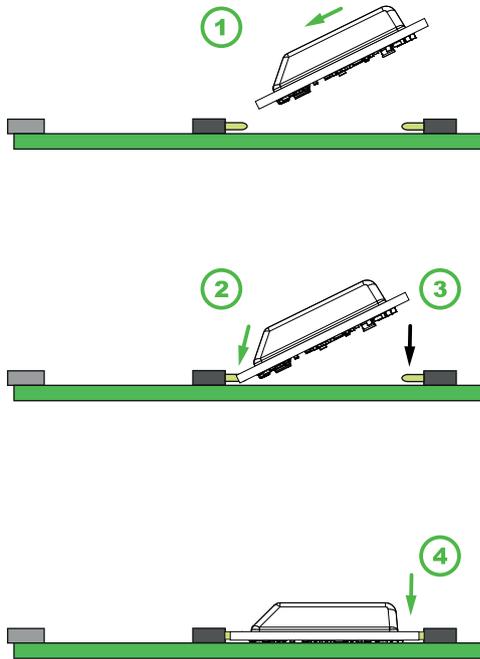

Sensor Evaluation Software

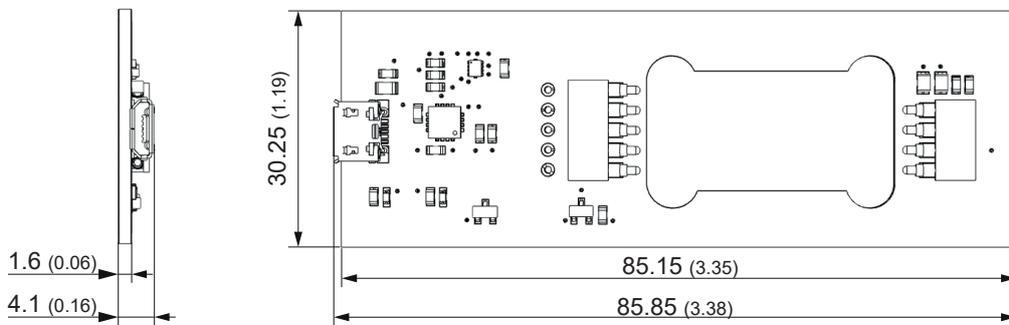

Please note: the relative humidity (RH) measurement is not implemented yet into the EE895 sensor module, the corresponding graph shows no curve and is headed by "n. def."
